THE BRIEF

Logicare are a recycling and waste management service and as such place importance on their environmental credentials.

G&H provided site analysis to detail the existing usage and the impact a solar system would have on the annual energy use as below

02

OUR APPROACH

Once the scaffold was up and our pre installation survey was carried out it was observed that significant corrosion was present to the existing roof to which the PV was to be installed.

G&H liaised with the client as they appointed a specialist waterproofing firm to apply a spray covering to the roof to give them an additional 25 year guarantee of watertightness to the roof.

Once complete the PV installation was completed and received praise from the inverter manufacturer for the high quality of our installation.

KEY ACHIEVEMENT

Providing ongoing client assistance with multiple metering and billing issues to a successful resolution
