Gipsey Bridge Academy

SERVICES

Emergency lighting, fire doors

CONTRACTOR

Eddisons

CLIENT

Infinity Academies Trust

HEADLINES

- New emergency lighting and fire alarm systems have improved the safety of the school and ensured full compliance with all regulations.

PROJECT OVERVIEW

With support from Eddisons, Infinity Academies Trust secured funding from the Condition Improvement Fund (CIF) to upgrade Gipsey Bridge Academy's safety systems. The project involved replacing internal fire doors, updating the emergency lighting system, and installing a new fire alarm.

Following a competitive tender, G&H was appointed to deliver the installation. Our team installed the new fire alarm system, including containment, cabling, panels, and detection units across the school, followed by full testing and commissioning. The emergency lighting system was also completely replaced to meet Chartered Institute of Building Services Engineers (CIBSE) standards for educational settings, including all containment, cabling, lighting units, and test key facilities.

To ensure the school could operate the new systems confidently, G&H provided comprehensive staff training.

The result is a fully compliant school with a safer environment, giving staff and students peace of mind and a space where learning can thrive.
